

May-June 2018 – International MBA, University of Haifa

“Doing Business in/with China – special issues”

Course number: 209.4902

Nuphar Class

Professor Dominique Jolly, Webster University Geneva

<http://dominiquejolly.wordpress.com/>

Dates (2018): Wednesday May 16th 17:00-20:00, Thursday May 17th 15:00-21:00, Friday May 18th 8:00-14:00, Thursday June 14th 15:00-21:00 and Friday June 15th 11:00-14:00

In 2001, China was the sixth largest economy in the world in terms of gross domestic product (GDP). Over the next ten years, China has bypassed all the world largest economies. It is now number two and it might outpace the USA in the coming years. It will probably be the first (in real terms) in the year 2030! As such, it is strategically important for almost all companies. A number of companies have already done well. That's true as well for smaller and less known companies. Plenty of business activities are now open to foreign companies. Yet, all these businesses differ in terms of key success factors.

Learning outcomes.

The aim of the course “Doing Business in/with China – special issues” is to help participants:

To build their own essential knowledge about doing business in/with China, i.e.:

- To reach an understanding of the most important socio-political reengineering of one country that has occurred in the world during the last 40 years, and the current political, economic and sociological environment in China;
- To learn about companies that “make China”, both Chinese and foreign;
- To learn about important public bodies in China.

To develop practical competences, i.e.:

- To develop abilities to recognize the Key Success Factors (KSF) of different businesses, to identify the best practices regarding suppliers, customers, staff and networks, and to implement appropriate policies;
- To develop practical abilities that can be used later in their professional life in the screening of suppliers or the search for customers;

- To build research capacity employable in a business context to better understand the challenges and overcome obstacles – participants have to learn to become more autonomous and acquire knowledge by themselves (passiveness is not accepted).

To foster specific attitudes, i.e.:

- To get used to talk in front a business audience;
- To adopt the appropriate state of mind to work in China, to develop attitudes toward identifying challenges and obstacles, to increase the probability of success and to develop profitable relationships in China;
- To develop understanding of differences to avoid being afraid of China.

Course structure.

The course is divided into 4 parts and 13 chapters:

1. The socialist market economy in the center of the world
 - a. China Corporation: A new legitimacy for the state apparatus
 - b. The place for economic records
2. Strategies for foreign companies in China
 - a. Modes of development for foreign companies
 - b. The areas of foreign penetration: opened businesses
 - c. A focus on the amazing journey of the automotive industry
 - d. Implementation issues
3. Paradigm shifts in business
 - a. Changes in the legal framework
 - b. Technology creation in China
 - c. Global sourcing strategies of large Chinese public groups
 - d. International strategies downstream
4. Challenges
 - a. Cracks in the Chinese society
 - b. The dark side: freedom, ecology, ethics, etc.
 - c. Political challenges: Will the 21st century be Chinese?

The first two parts will be covered from May 16th to 18th. The two following parts will be covered on June 14th and 15th.

Guest speakers program

Speakers are invited by the professor. The program for practitioners' testimonies will be presented later (after we get confirmations). Speakers from the industry are usually interested at establishing links with academia, at finding sources for recruitment of good participants, at promoting the image of their company, at testing their ideas with a nice audience, etc. They are invited in the class because of their experience. By definition, they are keen to share this experience. All speakers offer genuine testimonies about their real-life experience in China and their vision of business.

Nevertheless, all do not have the same level of expertise for communicating their experience. Keep in mind that while some speakers are at ease to attract audience interest, some other might have more difficulty, be more thankful; in that case, for respect and image, we have to stay polite ... Be prepared also to occasionally listen to speakers whose practice of the English language may vary. Accents might sometimes be a serious obstacle. This speaker program is also an opportunity to get familiar with inter-communication in a multi-cultural environment, to cope with ambiguity and to improve your own tolerance to ambiguity. You have to deal with messages which are partially truncated (if you are not comfortable with such situations, maybe you should redirect quickly towards accountancy or the teaching of physics).

A guest speaker session is organized in three phases. First, the professor introduces the speaker. Two, the speaker runs his presentation inside an expected slot of 30 minutes. Please, do not interrupt the speaker during his speech – except for clarification questions (e.g. what is the currency used in this table?). Three, when the speaker has ended his talk, the professor runs a Q&A session. Questions are raised only in this third phase to avoid that participant interrupt the speaker to raise questions that the speaker has planned to deal with latter on in his speech. Please, write your questions during the speech so to be ready to raise questions just when the Q&A starts.

Key-points: For each speaker session, participants have to infer the two or three lessons that they will have to keep in mind after the class. This means, to write two or three sentences. This works has to be done by teams of 2 students. Then each team has to hand over to the lecturer those two or three sentences that will be discussed in the class later.

Assessment

It is based on class participation (20%) and on the presentation in class (June 2018) of a business case (80%) developed by participants. 20% of the grade for the case will be given by the students who are listening to the presentations (peer review). Each case is allocated a slot of 30 minutes in class, i.e. 15' for presentation, followed by 15' questions and answers.

Please follow those steps:

1. Select in the list below the business sector you want to deal with and the company you will target on. Inform the Head of the Program (chalomabrod@hotmail.com) of your choices by **May 30th**. The first participant to register for one given business will be the only one to cover this business.
 - a. Automotive: Shanghai Automotive Industry Corporation (SAIC), First Automotive Works (FAW), Chang'An, Dongfeng, Beijing Automotive Industry Corporation (BAIC), Guangzhou Automotive Industry Group (GAIG), Chery, Brilliance China Automotive, Byd, Geely, etc.
 - b. Bank: ICBC (Industrial and Commercial Bank of China), China Construction Bank (CBC), Bank of China (BoC), Agricultural Bank of China (ABC), BoCom, regional banks
 - c. Fossil Energy: Sinopec, Petro China, Cnocc (China National Offshore Oil Company), Shenhua
 - d. New energies: Suntech Power, Yingli Solar, Trina Solar, Canadian Solar

Administration

- e. Telecom equipment: Huawei, ZTE, Lenovo, Xiaomi
 - f. Telecom services: China Telecom, China Mobile, China Unicom
 - g. Internet: Alibaba, Baidu, Tencent, Renren, Weibo, Youku
 - h. Electric appliances: Haier, Hisense, TCL, Midea, Gree
 - i. Electronic: Foxconn, Jabil, Pegatron, Celestica
 - j. Air transportation: Air China, China Eastern Airlines, China Southern Airlines, Shenzhen Airlines
 - k. Agro-Food: Wahaha, Tsingtao, Sanlu, Mengniu, Danone, Nestlé, Unilever, Coca-Cola
 - l. Distribution: Wal-Mart, Carrefour, Auchan, Tesco, Lianhua, Jindong, Yihaodian
2. In the industry you choose, select one company you are going to focus on. The following topics **have to be strictly covered**:
- a. Who are the company's competitors? Extend the list of names presented above. Assess profiles. Explain whether the business is fragmented or concentrated.¹
 - b. Who are the customers? Give names. Explain whether customers are fragmented or concentrated.
 - c. Who are their suppliers? Idem.
 - d. What are the Key Success Factors (KSF) in the business, i.e. the rules that apply to all competitors? Rank those rules according to their perceived importance.
 - e. How much the company controls those KSF?
 - f. What are the company's competitive advantages?
 - g. What are the company's competitive disadvantages?
3. Collect, bundle and process data before coming to the class.
4. Allocate enough time to match materials, to practice some rehearsal, and to adjust your oral presentation.

For the data collection, you can use all the means you want. You can look at published sources: published statistics, press release (newspaper and magazines), Internet web site, reports, books, academic articles, databases (Factiva, Proquest, etc.) etc. You can also look at primary data: meetings with managers from the company (and competitors), meetings with experts from the industry, etc.

For class presentations, **in June**, rules are the same for all the participants. This means that you have to strictly comply with time requirements. I will interrupt you if you go beyond the defined timeslot. Please, rehearse to make sure you are within the time allowed. The timeslot for presentations was chosen to fit with the ability of the audience to listen to your presentations as well as some planning constraints. One given issue can be dealt with a few sentences, or at the opposite, with several books. This is like Laplace law, as you may remember: one gas will occupy all the volume you offer to it. In this course, **15 minutes** is considered to be the right level of granulation.

¹ Fragmented Market: "An industry in which no single enterprise has large enough share of the market to be able to influence the industry's direction."

My strong advice for presentation is to escape from what I like to call “pedagogical karaoke”. This occurs when someone simply reads the slides that are shown to the audience. Everyone can read the slides; there is no value added in reading the slides publicly. Create a power point presentation with pictures, diagrams, schemes, etc. Avoid presentation made only with text! Yet, try to summarize your key messages at the end with only one slide.

Grading by participants (peer review). This is one of the means used to help participants to sustain their attention during case presentations in the class. They will have to work on their judgment and channel their subjectivity. One participant will be designated at each session to collect and compile assessments from all the participants.

Grading of participation. Participation is evaluated during class discussions and during guest speakers’ conferences. In the case of participation to Q&A after a speaker’s presentation, grade is straightforwardly linked to the number of questions you raise during the Q&A part. A form might circulate in the room to register the student’s name and his question – please circulate the form with discretion. Yet, the professor has the right not to post a question when the objective of this question is a ridiculous attempt to gather marks or when the question is irrelevant, vague or discrediting.

See you on May 16th, 2018!

In the meantime, you can watch:

Chapter 1 – Is China run like a corporation? (3’22)

<https://youtu.be/eYE1i-kIOgU>

Chapter 2 – Is China a place for records? (3’31)

<https://www.youtube.com/watch?v=j-YuCOYbaak>

Chapter 3 – How can a foreign company start a business in China? (2’45)

<https://www.youtube.com/watch?v=t6CKmwIXO2g>

Chapter 4 – Which businesses in China are open to foreigners? (2’57)

<https://www.youtube.com/watch?v=QmNThNiyiUc>

Chapter 5 – What are the rules of the Chinese car industry? (3’54)

<https://www.youtube.com/watch?v=6a5cxftiYP0>

Chapter 6 – How should we implement a business strategy in China? (3’03)

<https://www.youtube.com/watch?v=SXgrjJolAn8>

Chapter 7 – How much has China’s regulatory framework changed? (2’44)

https://www.youtube.com/watch?v=mbY2vl_nwPk

Chapter 8 – Is China on the world Research & Development map? (4'25)

<https://www.youtube.com/watch?v=0rmfPpSx0Ms>

Chapter 9 – What has happened with Chinese FDI? (3'09)

<https://www.youtube.com/watch?v=L5HIwN2f628>

Chapter 10 – Why do Chinese private companies invest outside China? (4'10)

<https://www.youtube.com/watch?v=7pucZFbBns>

Detailed Course Content. Thirteen major topics are considered in this course – organized into four parts, as detailed in the table below.²

Parts	Chapters	Content
The socialist market economy in the center of the world	(1) China corporation: A new legitimacy for the State apparatus	In less than half of a century, the Chinese Communist Party (CCP) has skillfully negotiated the transition from Marxism-Leninism to a socialist market economy. Political structures in place have so far managed to also ensure the consistency of one of the largest ensemble in the world. State control occurs in many forms: political control over the CCP, control of the largest Chinese companies, control of the two continental Chinese stock exchanges, monitoring of foreign investments, price control, etc.
	(2) The place for economic records	Over an area roughly equivalent to that of the United States, the country has 1.3 billion people. China is the largest agricultural country in the world with the largest number of farmers. Some constructions are impressive: Great Wall, Grand Canal, and more recently, the Three Gorges Dam. With a multiplier effect of 1.3 billion, the country also accumulates records in the productive sphere: 22% of the world market of beer, one third of world production of cigarettes, the largest market in the world for new cars, 50% of global steel consumption, 2200 TV chains, the first pool of Internet users, etc. The size of the market has fueled many fantasies. Yet, these scale effects have significant impacts.
Strategies of foreign companies in China	(3) Modes of development used by foreign companies	Foreign companies setting up businesses in China did not initially have any-other choice but to form joint-ventures with Chinese companies. Other modes of entry have been authorized more recently, as the creation of wholly foreign owned enterprises (WFOE) or even outright acquisition of domestic firms. If the relative weight of new JVs is going down, it has not gone down to zero. Trade-offs between these different modes of development depends on many factors about the foreign company such as its ability to work overseas JV, company’s existing knowledge of China, suppliers, distribution networks, etc.
	(4) The areas of foreign penetration: opened businesses	The intent is to provide an overview showing the extent of involvement abroad, to highlight a few key players, and outline the rules specific to diverse activities. Indeed, there are many industries where foreign companies are committed in China. In the most significant (where we see the largest numbers of employees), there are: outsourcing electronics,

² The first six chapters are in line with the six chapters of my book “Ces entreprises qui font la Chine” published by Eyrolles / Les Editions d’Organisation in October 2011. The next seven chapters (7-13) follow the organization of my new book “Stratégies d’entreprise en Chine” published by Pearson France in May 2013 ([Stratégies d’Entreprise en Chine](#)).

		automotive, hypermarkets and luxury. This part shows that there is no simple set of good practice to operate in China. The set of Key Success Factors (KSF) varies considerably from one industry to another.
	(5) A focus on the amazing journey of the automotive sector	The global automotive market is in full reorganization. The United States, Europe and Japan are losing market share. The forecasts point to an explosion of production outside these traditional territories. The automobile is one of the main sectors of historical entry of foreign firms in China. With the collapse of the North American market and a weak European market, foreign manufacturers in China have found a great driving force. After going bankrupt in the United States, General Motors has founded its recovery in China with its brands Buick, Chevrolet and Cadillac.
	(6) Implementation issues	This is not the strategy that raises the most important difficulties, but its implementation. This is especially true for soft issues such as the insertion of the foreign company in an environment that it does not know intimately. At this stage, the foreign company must also address the preservation of its technological advantages when it comes to China with technologies which are sources of its competitive advantage (or even other types of value-added knowledge). It is also the development of local capacity for managing people, and also, to adapt its marketing policies.
Paradigm shifts in business	(7) Changes in the legal framework	A series of gradual transformations allowed China to make significant progress to a market economy: revival of private property, recognition of private enterprises, phasing out of licenses, quotas and other restrictions, etc. Its legal and regulatory framework is gradually harmonized with international standards - including the very sensitive issue of intellectual property rights (IPR) with the ratification of conventions on this subject. Recent history was marked by the decentralization of powers from central government towards local governments; this decentralization is accompanied by differences in the applications.
	(8) The creation of technology in China	After several centuries of eclipse, China will possibly challenge the technological superiority of the West and become a dominant power in technical areas. China is no longer only bridging the technology gap it has with developed countries. Now, it wants to break its dependence <i>vis-à-vis</i> the suppliers of foreign technology. The country seeks to develop its own expertise in multiple areas: telecommunications, computer, nuclear power, solar panels, aviation, etc. China announces a plethora of plans for the future – such as being the leader of the revolution for the electric car. It remains for the moment focused on declarations of intent, although in

		certain targeted areas, it has already managed to gather a true potential.
	(9) Global sourcing strategies of large Chinese public groups	Large state-owned Chinese companies have adopted different strategies to ensure the supply of the huge industrial machine. They are now almost everywhere, from Australia to Africa to South America and Central Europe, creating an economic boom in some of these countries. The aim is to gain access to ore or energy resources. China has developed a range of options in those countries to guaranty that the machine is supplied. This includes: the capitalistic strategy, the banker strategy, and the implementation strategy.
	(10) International strategies downstream	For years, most of the Chinese companies have remained quietly on their territory. Since a few years, they are inspired by going abroad. Several Chinese companies (private and public) have entered into a large movement of deployment - as shown in the widely publicized case of the acquisition of Volvo by Chinese carmaker Geely. They are more likely to be some serious bargains in the future – in the banking industry for example. The country is strengthening its position as a superpower.
Challenges	(11) Cracks in the Chinese society	The revolution experienced by China in the last forty years is a time of change, instability and uncertainty. The risk of chain reactions and the consequences associated with these challenges could seriously hamper the future. Challenges are due to a series of geo-socio-economic fractures. Across the country are considerable differences in development, a growing divide between rich and poor, a population dynamics characterized by an aging population. We cannot ignore the dark side of Chinese society: the influence of the authorities on civil liberties, environmental damage, the transformation of societal values to a discriminating materialism, etc. There are ultimately many political challenges. Domestically, the questions focus on the future of the autocrat regime in place, the inner tensions (Tibet, Xinjiang), and the future of the relationship with Taiwan. Externally, we see that China is gaining in confidence and gradually building a doctrine that will shape the future. For foreign companies, these challenges have an undeniable political impact on their economic activities.
	(12) The dark side of the Chinese society: freedom, ecology, ethics, etc.	
	(13) Political challenges: Will the 21 st century be Chinese?
