

## Information Management Portal System

Organization: Sanmina-SCI Medical Systems

Student Name: Israel Amar

Advisor: Mr. Alex Reichman

Sanmina-SCI Medical Systems, located in the industrial zone "Koren" in the city of Maalot in the Western Galilee. Sanmina is a global American company, which specializes in assembling complex machines, mostly medical, and has 480 employees.

Sanmina's worldwide portal is serving 50 factories in 22 countries around the world in English. The amount of the information content on this site is very large, finding the necessary information to the factory worker in Israel is a complicated task, mostly done in foreign language, and not always initiate the relevant results. The local Organization required a portal to be used as an information system - that will be interactive, informative, in Hebrew language and, user friendly.

The final result is a comprehensive information portal, with the latest technologies, a Hebrew-language interface, easy to manipulate, and user friendly. The portal has become a significant part of the products of theoretical and practical learning of employees. The portal also serves as a "gateway", where the employees can choose the specific application they need to run. Design with a new appearance, practical, clear categories for metadata, and contains relevant information which is very useful for company employees.

The main conclusion is that through interactive enterprise information system, the organization, can improve the use and dissemination of information in an easy and straightforward. The fact that I am a part of the organization helped me to characterize appropriate information system.
